Cleaning up

It's easy to keep your airless sprayer in top condition and after the first time, it's so easy to do to ensure your unit will be ready for its next job...

It's all about your paint

In field trials, airless sprayers have been shown to be up to

10x FASTER

than using conventional paint brushes.

You can paint or coat anything more quickly. Added speed means you get done in less time, with less work.

And that's really important if you've got limited time - outside for example with a short weather window. It's been estimated airless spraying is up to ten times faster than using a standard paint brush!

TOOLINE

Your guide to COMPRESSORS:

OUR AIR FORCE.

Harnessing the air around us for your air tools is what a compressor does. It stores air at a predetermined pressure, couplings and hoses. However some air tools - particularly spray guns - require more than 116psi (8bar) to operate well. We have 4 models in the range reaching up to 145psi (10bar), performing compressor to suit...and at the right price.

HOW DO YOU KNOW WHICH ONE IS BEST FOR YOU?

Choose from three types of drive systems: direct drive, oilless direct drive or belt drive. Direct driven compressors have FAD between 50l/min to 215l/min, are relatively noisy but cost effective. 'Noise' is an issue, direct driven compressors have similar flow out but are very quiet and don't require oil changes. Belt driven compressors' FAD ranges from 180l/min to 300l/min, run smoothly and quietly and should last much longer than direct drive compressors.

Require three phase power have superior free air delivery - up to 1160l/min, but are bigger and usually need a forklift to move them.

At a glance:

- Air compressors take the standard air that we breathe and 'compress' it - under pressure, storing it in tanks to use as you need it.
- If you pump on a cheaper, less efficient tool on your tool may not work as it should because it won't have enough pressure.
- Match your compressor's FAD (Free Air Delivery) to the capacity needed by your air tools. Remember that more is better. At least 10% extra is a good guide. FAD is measured by an Australian protocol.
- Choose the size and drive system you need, based on your requirements, including portability.
- Backed by Tooline Warranty!

Tooline has been a trusted name in New Zealand for decades... known over that time for real reliability and excellent value for money. We've chosen our brands and tools as the best ones to get the job done, perform the way you need, and offer the sort of realistic working lifespan you should be able to expect - because downtime due to dodgy tools costs you more in the long term than choosing quality in the first place. It's all backed by our local commitment to support. Our name is our promise to you. Our reputation has been built on delivering and supplying what you want at the prices you want to pay.

Whatever you need,
it needs to come with
✓ reliable performance,
✓ a reasonable price
and easy access to
✓ local, nationwide support...

Our best products are sourced from all over the world for their technical advances, long working lives, dependability. That's balanced by someone local for after-sales support.

Where it comes from is never as important as how well it works. Isn't that the truth. And being cheap isn't always the same as offering good value. We source products from all over the world, from some of the leading and most experienced suppliers in their respective sectors. Those well established relationships with these industry leaders mean you can be confident of truly great products at fantastic prices.
